The Soma Safe Enclosure (collapsible frame with a netted canopy which fits over most standard hospital beds) and the Soma Safe Enclosure Bed, which is an enclosed bed system secured with a netted canopy, provide a safe, patient friendly, easy to use, clinically proven and cost-effective alternative to caring for a patient that is subject to falling, wandering, confusion, delirium, aggression or seizures. Typically these are patients that have Alzheimer’s, dementia, Huntington’s, Cerebral Palsy, Rhett’s Syndrome, Parkinson’s, Strokes and Traumatic Brain Injuries. Zippers sewn into the canopy provide access to the patient on all four sides. By creating a more secure, manageable environment, similar to a child’s crib, the patient becomes much less disturbed. Freeing the patient from other forms of restraints, such as tie downs, vests and drugs enables them to vent their restlessness with little or no danger of inflicting injury on themselves or others. This is a product that is used in medical centers; hospitals, rehabilitation units, nursing homes, assisted living and home care settings.

THE SOMA SAFE ENCLOSURE & BED FOR HOME CARE

Safe Enclosure
Are you responsible for caring for a spouse or family member that suffers from Alzheimer's, a Traumatic Brain Injury, Huntington's, Stroke, Rhett's Syndrome or other cognitive or neurological disorder?
Is your family member in an expensive long-term care facility because you are unable to care for them at home?
Are you looking for a way to care for your loved one at home?

Security...

instilling peace of mind in the caregiver
Vivax Medical is committed to improving the patient's well being while lowering the cost of their care. We support this commitment with products that provide safe, cost effective and convenient alternatives to conventional patient care.

The Soma Safe Enclosure product line provides a superior alternative to traditional restraints and the cost of long term care facilities.

By using the Soma Safe Enclosure, you are providing a more natural and relaxed home care environment for the patient. Most medical studies have shown that patients' recovery and quality of life are better when they are in familiar surroundings.

**THE SOMA SAFE ENCLOSURE & BED FOR INSTITUTIONAL CARE**

**Safe Enclosure**

Are you looking for a more clinically effective way of managing patients that are agitated, distraught, excited, having seizures, delirious or otherwise cognitively impaired?

Are the costs of lengthened patient stays, sitters, false alarms and patient injuries associated with these patients diminishing your capability to provide affordable health care?

Then you should consider using the Soma Safe Enclosure from Vivax Medical!

In most cases, the Soma Safe Enclosure is a superior alternative to medications, four point restraints, vests, sitters, bed alarms and isolation in dealing with the behaviorally challenging patient.
Vivax is committed to bringing clinically superior products to market that improve patient care and help you lower the cost of healthcare!

As a healthcare practitioner your primary concern is for the well being of the patient. However, you also have to be concerned with the cost of providing your healthcare services because low levels of reimbursement may not cover your costs and compromise your ability to provide adequate care for all.

The Soma Safe Enclosure product line provides a safe, humane and relaxed environment for the behaviorally challenging patient that otherwise would require an intervention of restraint. It:
- Allows freedom of movement,
- Avoids patient injuries,
- Permits the patient to interact with their environment, and
- Promotes security and well being.

More traditional restraint methods are less desirable:
- Medications can further disorient patients, create complications of their own and retard recovery.
- Four point restraints and vests further agitate the patient and cause injury and even death in extreme situations.
- Sitters are very expensive and risk injury to themselves and the patient.
- Bed Alarms suffer from too many false alarms, and
- Isolation can further retard patient recovery.

Distinguishing Features of the Soma Safe Enclosure:
- Models are available with and without a bed
- The model SSE-400 for use with facility beds is collapsible to 15" x 15" x 74" and requires little room for storage.
- The frame is extremely sturdy, designed for use with patient weighing up to 350 pounds.
- Models are available for patients weighing up to 600 pounds.
- The canopy is constructed of a soft medical grade anti bacterial nylon that prevents the patient from injury while still being strong enough to provide safety.
- The netting is sized to prevent the patient from putting their fingers through it.
- The netting is black in color to improve visibility and prevent stains.
- The frame is completely padded for patient safety.
- The canopy can be laundered in a washing machine or hand wiped clean.
- Strong locking nylon zippers prevent opening from the inside.
- There are access ports for IV lines and catheters.
- The canopy fits tight to the mattress to prevent patient entrapment.
- Can be used with or without a headboard or footboard.
